

# scellus BOX

**Your smart business solution**

---

email + backup + firewall

# Why do you need it?

Scellus Box was designed as a solution that is as functional in a small office setting as it is in larger corporation. It is a dependable and affordable way to organize and safeguard your work.

## Scellus Box means business.

Scellus Box is designed to help you communicate, collaborate, and share information. It's perfect for any small business or group – retail shops, medical and law offices, classrooms, design studios – you name it.

Now you can have your own server that supports email on Mac computers, PCs, and mobile phones. Sync and share calendars and contact information. Access and swap files securely – and at lightning speed between PCs be it a Mac, Windows or Linux. And automatically back up all your important data.

## Your own mini IT department.

We will help you configure all your workstations so you don't have to. That makes it perfect for people who've never run a server before, or for overtaxed IT departments. We will walk you through the setup process step by step. And if you want help at any stage, we are just a phone call away.

## Open for business: integration and compatibility.

Advanced network hardware and software make it incredibly simple to integrate Scellus Box into any Mac or PC environment. No hardware or software conflicts between components resulting in more reliability and you can put it to work with the equipment you already have. That's the all-in-one advantage!

## Cost effective.

Less expensive to purchase; as low as RM 6,999 up to 50% less than the cost of purchasing each components independently.

## Space saver. Energy saver.

Scellus Box uses less than 20 watts of power when idle. That's a fraction of the power consumed by a similarly equipped tower server. It's also made from highly recyclable materials. So it has a big impact on the way your office works and a tiny impact on the planet.

### Mail

Send and receive email on the Internet.

### File Sharing

Create shared folders for exchanging files and backup.

### Firewall

Stop spam, viruses and other attacks before they reach your network.

### Archiving

Archives all emails to assure that they are available.

# What is it?

Scellus Box was designed as a solution that is as functional in a small office setting as it is in larger corporation. It is a dependable and affordable way to organize and safeguard your work.

## General

**Simply simple.** If you think it takes a dedicated IT department to run a server, think again. Scellus Box is designed so people of all technical levels can easily manage servers. And it provides advanced features so you can have total control over your network.

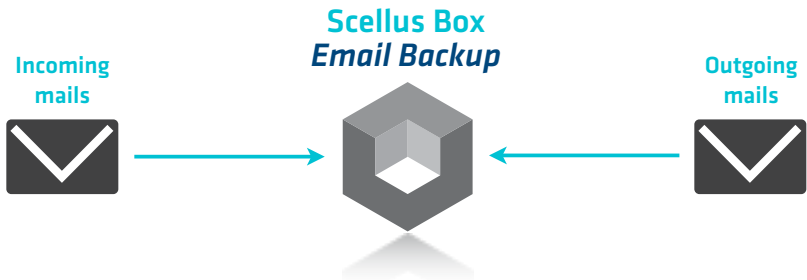

**Be your own IT department.** Once we've set up your server, you can easily manage users and groups on the server and customize it to fit your needs.

**Disk space monitoring.** Running out of disk space can reduce the reliability of your server. Scellus Box includes tools that monitor disk space and proactively free up space by deleting or backing up noncritical logs and utilities.

**Compact Design.** When it comes to servers, the size you want is small—a compact entertainment center that can fit virtually anywhere. That's the Scellus Box. Its footprint is just 270 mm wide and 393 mm deep, and its height is only 212 mm. You can fit it anywhere in the office. Did we mention its pretty too?

# Email server

Scellus Box utilizes the next-generation collaboration server that provides organizations greater overall flexibility and simplicity with integrated email, contacts & calendaring.

All incoming & outgoing mails will be backed up

## Email

**Inbox, outbox** The ideal solution for small businesses or companies without an existing mail server, Scellus Box allows you to bring email in-house, using your own domain name rather than relying on an ISP to host your email.

**But, we already have an email server.** If your organization already has a mail server, you'll appreciate how seamlessly Scellus Box integrates into your network, ensuring that all emails, incoming or outgoing, are being archived on the go.

**Email backups, all the time.** Scellus Box archives all emails to assure that they are available as long as the company policy demands this. Archived mail can be restored by resending it to the original mail address.

**Junk mail filtering.** Scellus Box includes a powerful junk mail filter that analyzes the text of each email and assigns it a probability rating for being junk mail – and then marks the mail as potential junk.

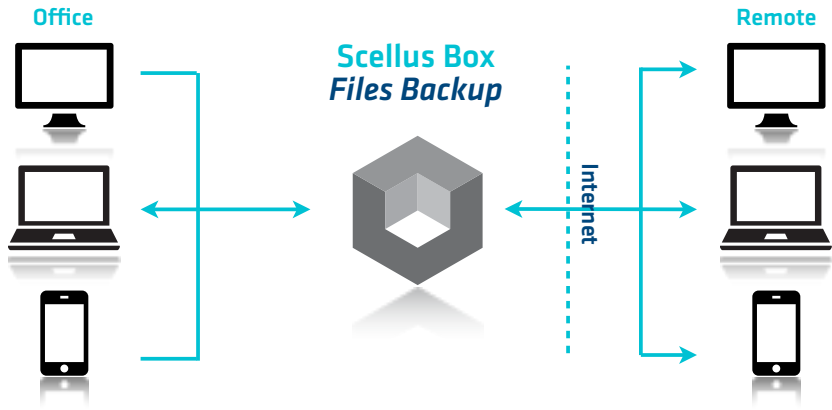

**Virus detection and quarantine.** Email is the primary mechanism viruses use to spread and propagate from one computer to another. That's why Scellus Box includes an antivirus engine to scan mail messages and attachments for viruses, automatically deleting or quarantining any offending files.

**Meet compliance needs.** Define email usage policies in your organization to ensure compliance with legislation and best practices. Apply different policies to groups or individuals based on role. Easily adapt to policy changes through a simple policy management interface.

**Rapid deployment, easy maintenance** Scellus Box works with your existing email system. Updates arrive automatically, without downtime or additional costs.

# Backup server

Scellus Box gives you peace of mind. Think of it as a digital safe-deposit box: All your files are backed up automatically, every day, and you can easily restore a lost file or even an entire damaged PC.

Shared files can be accessed remotely

## Protect the things you care about – automatically

**Protect and serve.** Get peace of mind with automatic daily backups. Scellus Box helps keep your organization's important files safe without any extra effort from you.

**Back up your computers every day without doing anything.** Backups are performed automatically on a daily basis for every computer, and an innovative system ensures that Scellus Box only backs up data that has not already been backed up before, so backups are fast and compact.

**Restore files, folders, and entire computers.** You can easily restore an entire computer or an individual file or folder to a previous point in time. You'll never lose another file again-and you can even rescue a PC that's had an unfortunate accident, effectively turning back the clock to before the mishap happened.

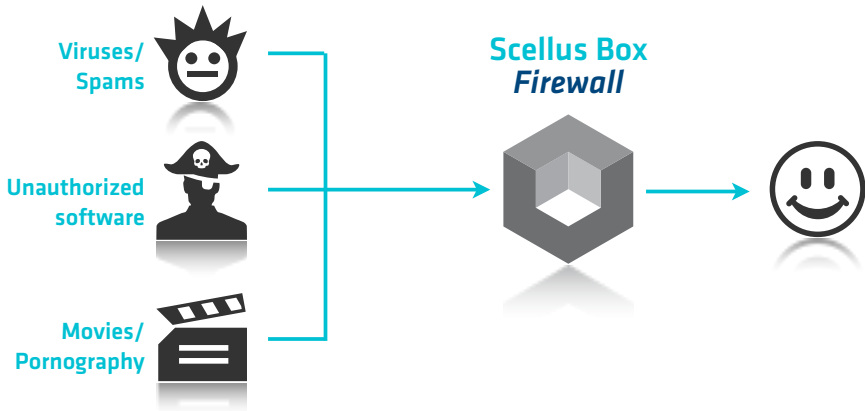

**Easily share from anywhere.** You can share any files with everyone in your office or anyone with an Internet connection. You set up who gets to see what with a simple drag and drop.

**Work from home.** Scellus Box lets you connect remotely to the computers at the office. You can run an application or even send a file to your printer, all as if you were sitting in front of your office computer.

**Any computer, any platform, anywhere.** Although the Scellus Box is based on the Linux operating system, Scellus has designed it to support features for systems running Microsoft Windows, Apple Mac OS X & Linux.

# Firewall & content filtering

Scellus Box protects against all of today's sophisticated malware threats. This model combined with central management eliminates threats and reduces the administrative burden.

## Firewall & Content filtering system

**Protect your network** Scellus Box protects you from malicious incoming Internet threats such as viruses, spyware, hackers, identity thieves and more.

**Monitor apps & network** Monitor online behavior at the user, client and incident level. You can see what web sites are being visited, by whom, on what system.

**Control your network.** Restrict access to inappropriate sites, manage when certain sites can be accessed, and control undesirable Internet activity, like web shopping during work hours.

**Keep networks safe.** Stop spam, viruses, phishing, denial of service, directory harvest attacks, and other attacks before they reach your network.

**Web Filter.** Block or log time-wasting sites like MySpace and Facebook. No installation on any of your PC required.

**Spyware Blocker.** Protect users from websites and files that install spyware.

**Save bandwidth, improve Internet speed.** Scellus Box saves bandwidth through content caching. Cached content means data is served locally and users will see this through faster download speeds with frequently-used content.

**Firewall.** Scellus Box firewall filters traffic based on IP address, protocol and ports, create a DMZ, and more.

**Ad Blocker.** Block web ads at the gateway by transparently removing them from web pages.

**Work remotely.** By enabling Open VPN, you can remote access to your network. Instant setup and it just works!

**Reporting** Monitor user level, client level and incident level behavior. Share reports in PDF and HTML formats.

# Specifications
